What kind of Data Scientist are you?

The 'Data Scientist' is an increasingly valuable role to any organisation looking to set up a data science facility.

But what exactly is a Data Scientist? What skills are required?

In collaboration with our customers, Mango Solutions has defined the 6 core attributes of the contemporary 'Data Scientist'.

Creating your own bespoke radar is easy. Simply rate how strongly you agree or disagree with the challenge questions to discover your personal strengths and weaknesses as a data scientist.

Don't overthink your answers - go with your initial reaction!

Why we built the Data Science Radar

We have built the Data Science Radar as a conceptual framework that allows users to explore these character traits in more detail and to uncover their own data science profile type.

On an enterprise level, the Data Science Radar can help team leaders in the following ways:

- To help *shape a bespoke data science training course* for your team by objectively identifying training requirements of your existing staff.
- To *monitor learning* during a long-term data science training programme.

- As a visual aid to *support your data scientist recruitment* requirements, and to highlight where there are gaps in the skillset of your existing team and to identify the skillsets of potential new recruits.
